

Process & Packaging, Inc.

Design - Manufacture - Installation of Process & Packaging Systems

Our Background in Sankey Keg Systems

OVER 20 YEARS IN OPERATION

IDD Process & Packaging, Inc. was founded in 1990, by Jeff and Sue Gunn, who brought together other senior process and packaging engineering staff members to provide a combined experience in the brewing and beverage industry systems design, manufacture and construction which covers a combined total of more than 240 years.

IDD operates a U.K. office and factory, with agents in Europe, China and Africa and customers in more than 20 countries around the world. Our main factory is in Moorpark, California where sales, design and manufacture take place.

Jeff Gunn (President & CEO) was on the original development group that was formed in 1959 to develop the Sankey keg system as we know it today. After completing engineering college and an indentured engineering apprenticeship, he joined Burnett & Rolfe Ltd. (one of two UK companies that developed the Sankey keg system) in 1963 as a development engineer and progressed with the company through 1978 when he transferred to the USA in 1979 to start and operate APV Burnett & Rolfe, Inc. and subsequently APV Rosista, Inc. to support the North American Sankey keg system operations. In 1990 he and his wife Sue started IDD Process & Packaging, Inc. as a Brewery and Beverage design and manufacturing company in Southern California with a strong emphasis on promoting the Sankey keg systems for the (then) emerging craft brewing industry.

That emphasis and focus now makes IDD Process & Packaging, Inc. the strongest supplier of keg systems to the craft brewing industry worldwide.

- Member of the Brewers Association - U.S.A.
- Member of the California Craft Brewers Association - U.S.A.
